Faculty of Forestry

Ethno-biology of Forestry

SKS : 3 (2-3)
Offered in : Semester 5
Prerequisite : Basic knowledge of forest ecology and sociology
Course coordinator : Prof. Dr. Ervizal AM Zuhud
Language : Both, Indonesian and English

Description of the Course:
The conservation of tropical forest is very strongly related to the “local or traditional community” (forest local community). The wisdoms, traditional and local knowledge of forest communities are very important for conservation efforts and sustainable use of it. Therefore, in this course, students will be given the knowledge and skills of these fields, especially to develop the methods.

Learning outcomes:
Upon successful completion of this course the student will be able to introduce and analyze the concept of ethno-biology in forestry with respect to their application in forestry practices.

Indicative assessment:
1. Written test (70%)
2. Project report (20%)
3. Project presentation (10%)

Contact hours:
28 hours for lecturing and 42 hours for practicing
